

EXTENDS FILTER LIFE • PROTECTS BLOWER MOTOR

HAIRLESS

PEAK AIRFLOW & TOP PERFORMANCE

IMPROVED OPERATION

HairLESS Filter is a revolutionary new filter designed to deflect most hair from attaching to existing blower filters, increasing the life of expensive equipment. HairLESS Filters are model specific and designed to install over the blower's existing filter, providing improved operation without compromising air flow to the blower and allowing the equipment to work at maximum efficiency.

EASILY CLEANED

Hair naturally falls off HairLESS Filters, and any remaining hair can be easily brushed off by hand. Dog dander can simply be wiped away with a damp cloth. Since HairLESS Filters are installed over the blower's original filter and secured with Velcro, the original filter requires less cleaning and does not need to be replaced as frequently. Under normal use, HairLESS Filters have an estimated operating life of 3 to 4 years.

REDUCES TIME

HairLESS Filters reduce the time required to keep filters clean and help equipment operate at full air flow with less heat buildup. No changes are needed in the grooming routine and clean-up takes just minutes.

MODEL SPECIFIC DESIGNS

Sized for a perfect fit, HairLESS Filters are currently available for:

Challengair (2000 XL)

K-9 (all versions)

Chris Christensen

Metro (all versions)
