

STOP BUILD-UP ON FINS • PROTECT INTERNAL FILTER

# HAIRLESS

## PEAK AIRFLOW & TOP PERFORMANCE FOR DEHUMIDIFIERS

### STOPS BUILD UP ON FINS

HairLESS Filters are made with a proprietary material designed to stop hair and dander from collecting on the internal filter and fins of dehumidifiers.

### EASILY ATTACHED

The filter design features a lock and loop system which easily attaches the filter to the dehumidifier housing using a propriety adhesive.

### REDUCES TIME

HairLESS Filters reduce the time required to keep dehumidifiers clean. Normal, every day usage results in a small amount of hair to be removed with a light brush of the hand. The filter is recommended to be removed once a week and rinsed with water to remove any dander build up. The internal dehumidifier filters should also be checked weekly to remove occasional small amounts of hair.

### EXTENDS EQUIPMENT LIFE

Groomers using HairLESS Filters have reported at least 4 months between fin cleanings, and the effort required to clean the fins when using the HairLESS filters is drastically reduced.

### PURCHASE FILTERS

HairLESS Filters are currently available for:  
B-AIR VG-1500 Dehumidifiers  
DrizAir 1200 Dehumidifiers

To purchase a HairLESS Filter, or for more information, contact:
